教學綱要

一、教學目標(Objective)	Medical sociology is a branch of its mother discipline, sociology and, yet, medical sociology covers a wide spectrum of topics. In this course, we will explore only a few of them. The main purpose is to help students get familiar with how health is shaped and determined by societal factors, such as the norms and values a society shares or the group membership to which we belong. We will learn how social factors are related to health and illness, how the stratification of societies have impacts on the distribution of morbidity and mortality, how health is socially constructed, and the training and socialization of health professionals. As the population is aging globally, we will touch some end-of-life issues and health inequalities and disparities in the access and utilization of health care.
二、先修科目(Pre Course)	None.
三、教材內容(Outline)	Topics included: social construction of illness, social factor and health, health disparities, medicalization of the society, sociology of death and dying, and other important issues in this area.
四、教學方式(Teaching Method)	lectures, discussions, student reports, and videos.
五、參考書目(Reference)	1. Cockerham, William C. (2004). Medical Sociology (Chapter 6, 9, 10). New Jersey: Pearson Education/Prentice Hall. 2. Moynihan, Ray and Alan Cassels (2005). Selling Sickness: how the world's biggest pharmaceutical companies are turning us into patients. New York: Nation Books.
