modes de production

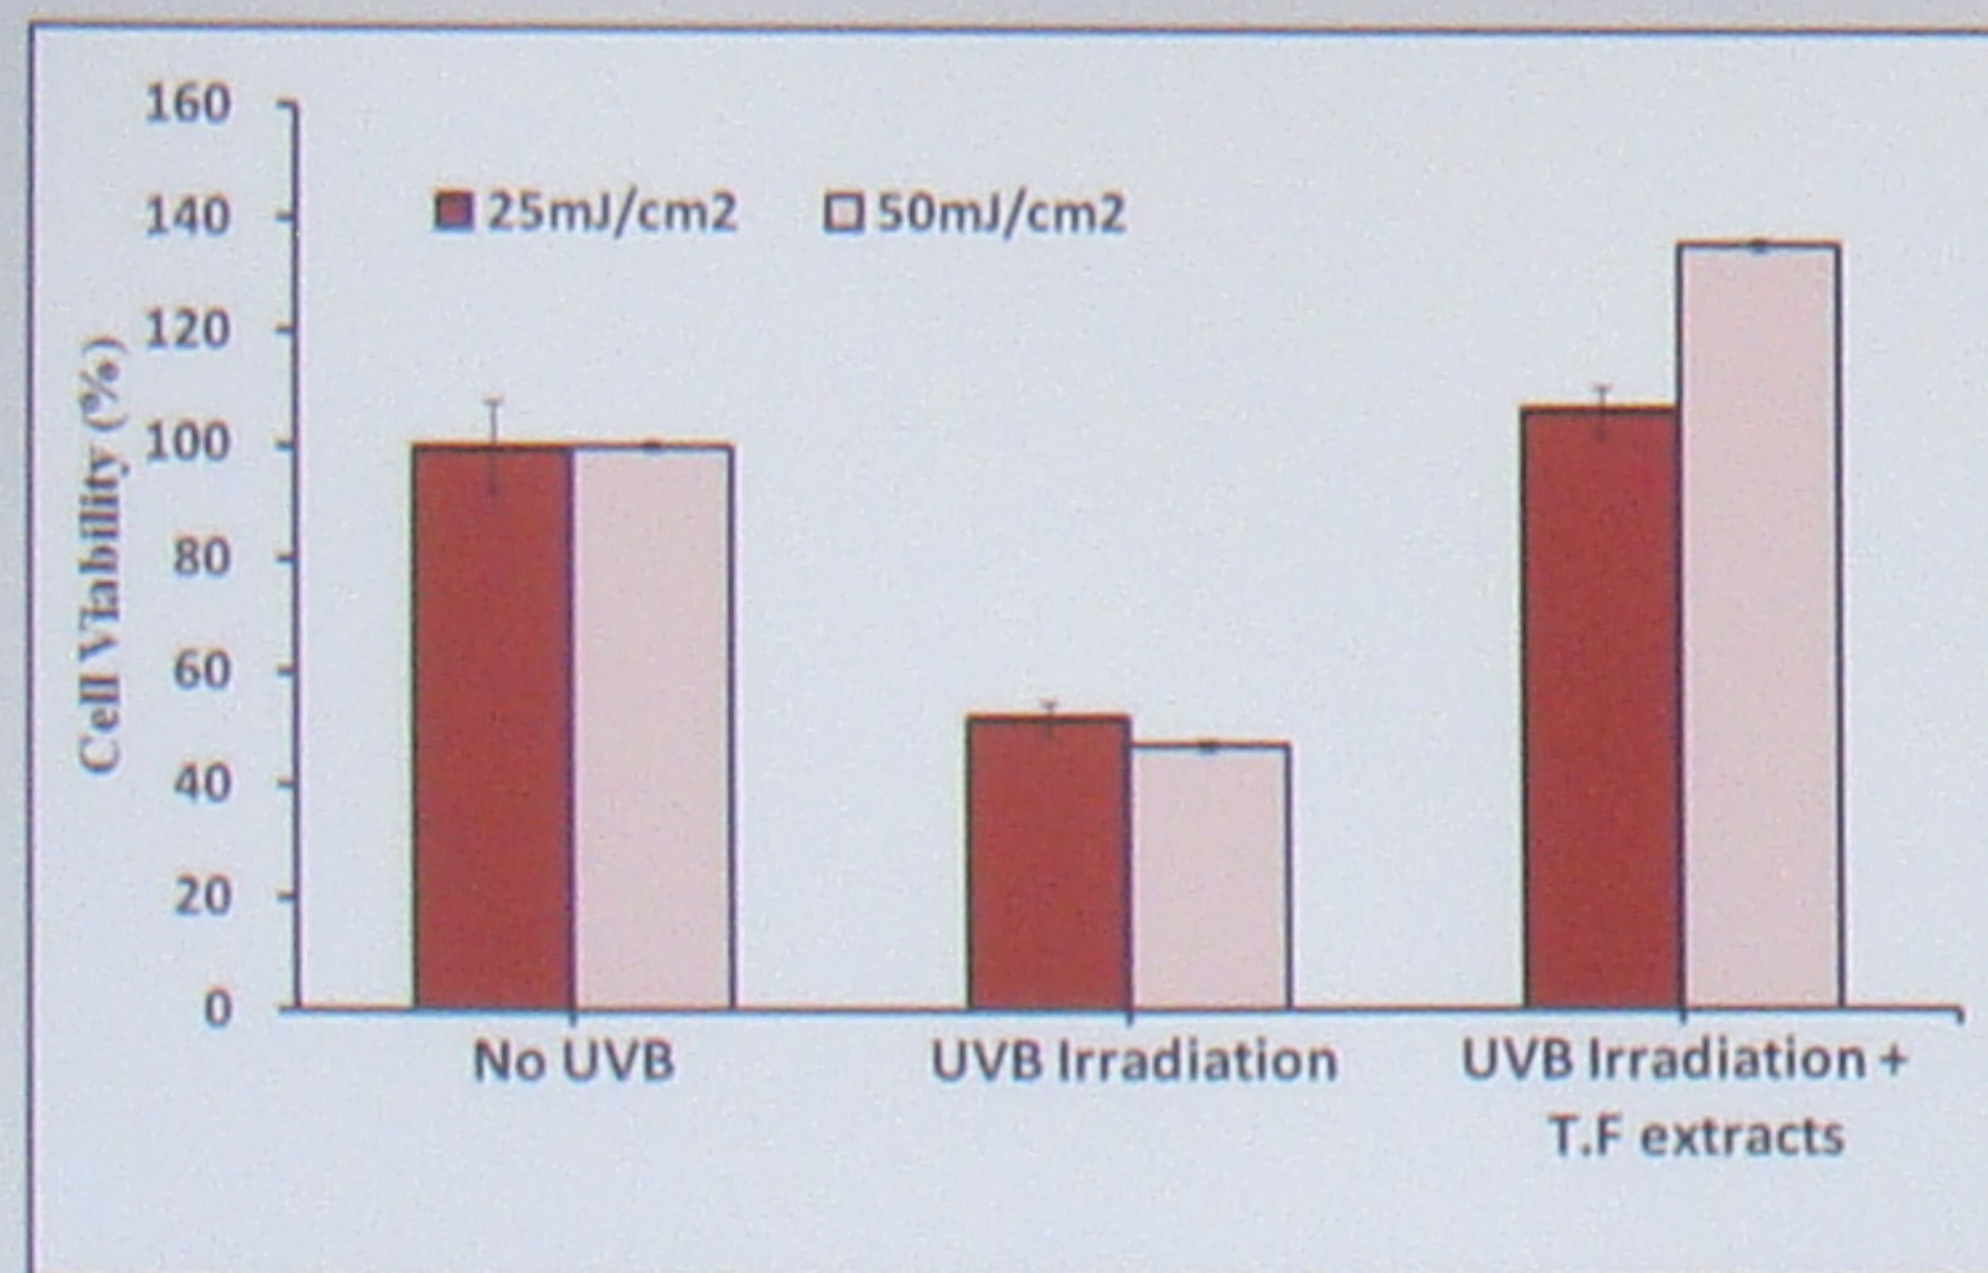

Green invention of 3-in-1 Tremella Fuciformis skin care products

TREMELLA FUCIFORMIS BERK EXTRACTS FOR RESISTING
ULTRAVIOLET LIGHT AND MANUFACTURING METHOD THERE

Tremella Fuciformis is a special kind of mushrooms polysaccharides and antioxidants, and it is a very medicinal mushrooms. The biologically active compounds of Tremella Fuciformis were extracted, and they have been found that they were able to protect the skin cells to against UVB (UVB) irradiation damages. The patent of this extract of Tremella Fuciformis has already applied for Taiwan pending. The skin care products of Tremella Fuciformis have been developed. In addition, in order to reduce the burden of women to carry skin care products out, the packaging design are innovative designs. We use the 3-in-1 concept to combine 3 bottles of skin care products containers into one, and the material of these bottles are made from biodegradable polylactic acid (PLA). This internal 3-in-1 bottle is able to be broken down in environmental breakdown. In summary, the internal and external design of this product has reached the true value of green.
