

The heat-supply system provides common clothes stand with the warming-up function. In the cold winter, the clothes stand warms up your clothes, scarf, and hat before you go outside. The warm clothes can fight against the cold wind and provide more warmth for people whose hands and feet feel cold easily.

Winter is a dangerous season for the elderly. Due to the cold weather. Especially, the outdoor and indoor temperature is in huge difference. In order to avoid a sudden case of cold make blood vessels. Sharp contraction make blood pressure suddenly increased cause a heart attack or cerebral apoplexy. So must to do the warm preparations. When you go out.
