

IV drip

Safe And Friendly

The general IV drip uses four-wheel design, and is hard to control the direction. The new IV drip adds an extra wheel in the center of the origin four wheels. The main wheel leads the direction easily, and other four wheels can assist it. And the drip have the light source and the alarm system, if the patient was walking alone in the shadows can turn on the light, if suddenly unwell patient can activate an alarm system call for help. The general IV drip gives its users the cold and strange feeling, according to it, the New IV drip for personal. Part of IV drip the head, especially the design of many different styles, so that the patients in the hospital's lives can feel more fun and feel warm.
