

+ Design concept

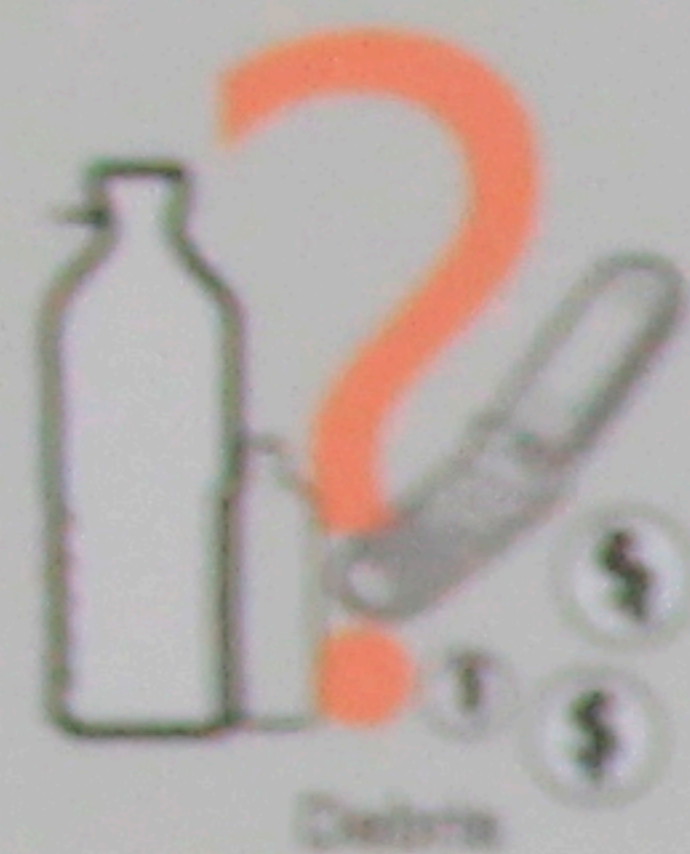

在院患者需要利用點滴時身體都跟着一根點滴架,如果患者想散步帶著點滴架很麻煩,此發明是將點滴塞在包包肩帶下,運用包包肩帶施壓的原理讓點滴液流出,並且點滴袋內部液體可將包包重量平均施壓於肩膀減輕包包的負擔,患者可將隨身物品帶在身上,並不被點滴架侷限行動。

The traditional IV bag is not convenient, patient have to carry them around wherever they go. The new design combines the IV bag with a bag, putting it under the bag. Using the pressure of the bag to make IV bag work. The average the pressure for patient when carrying and it is easy to carry as well.

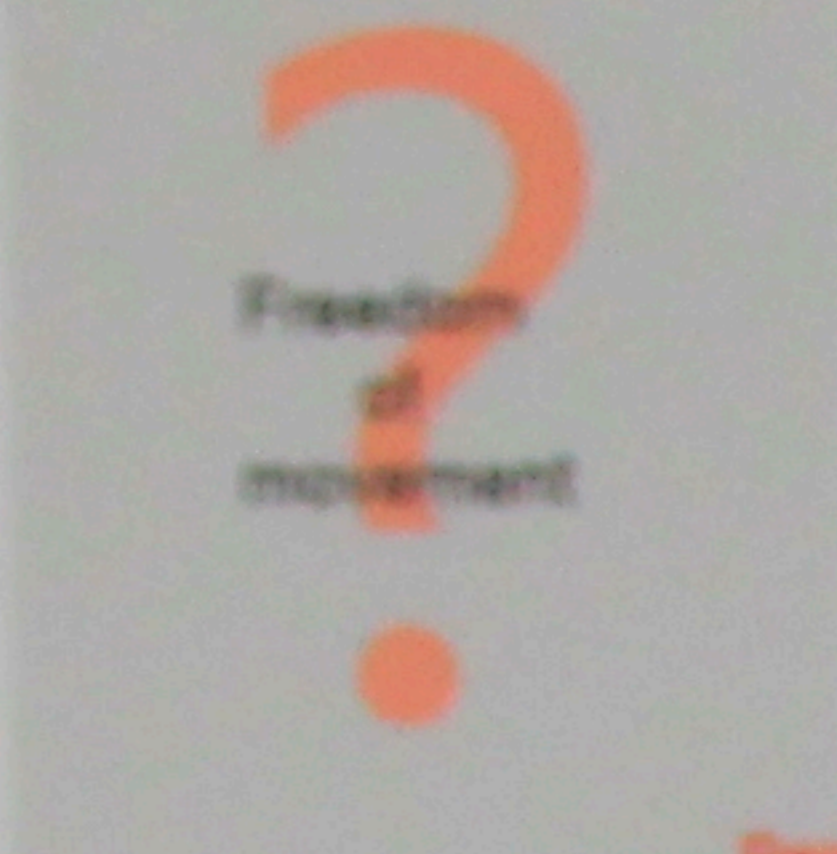

+ Why design?

Up and down stairs

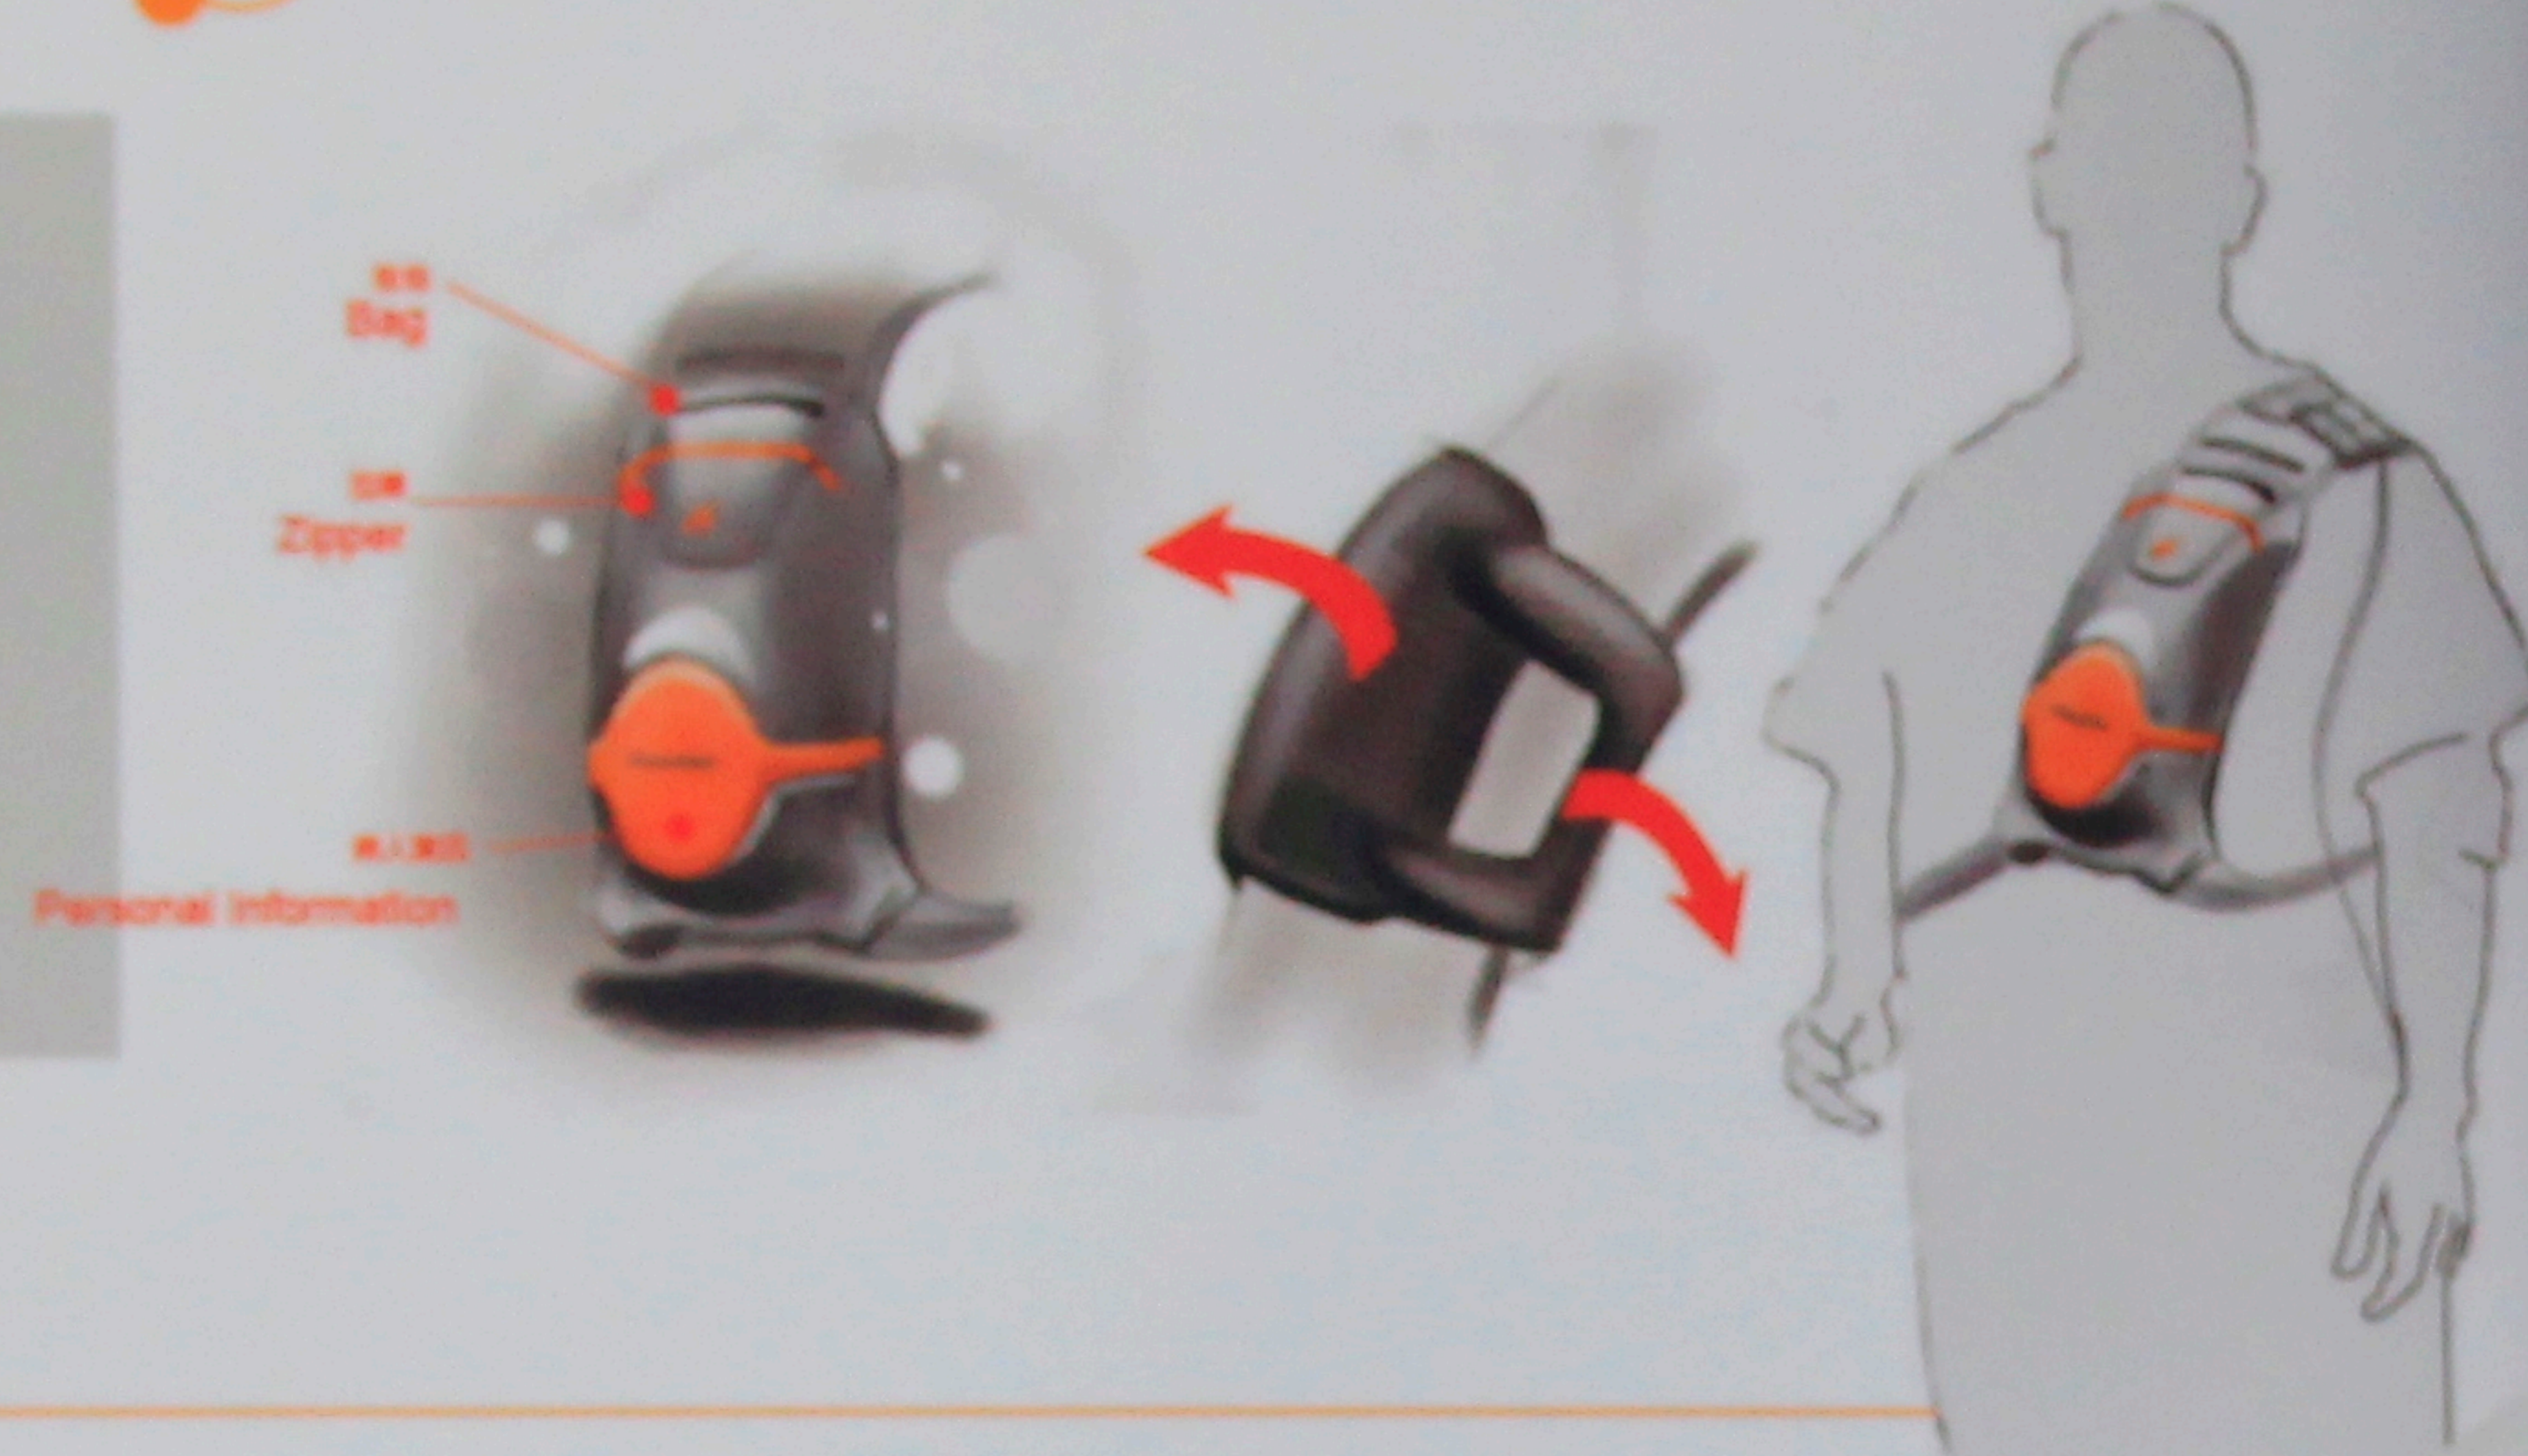

Drugs

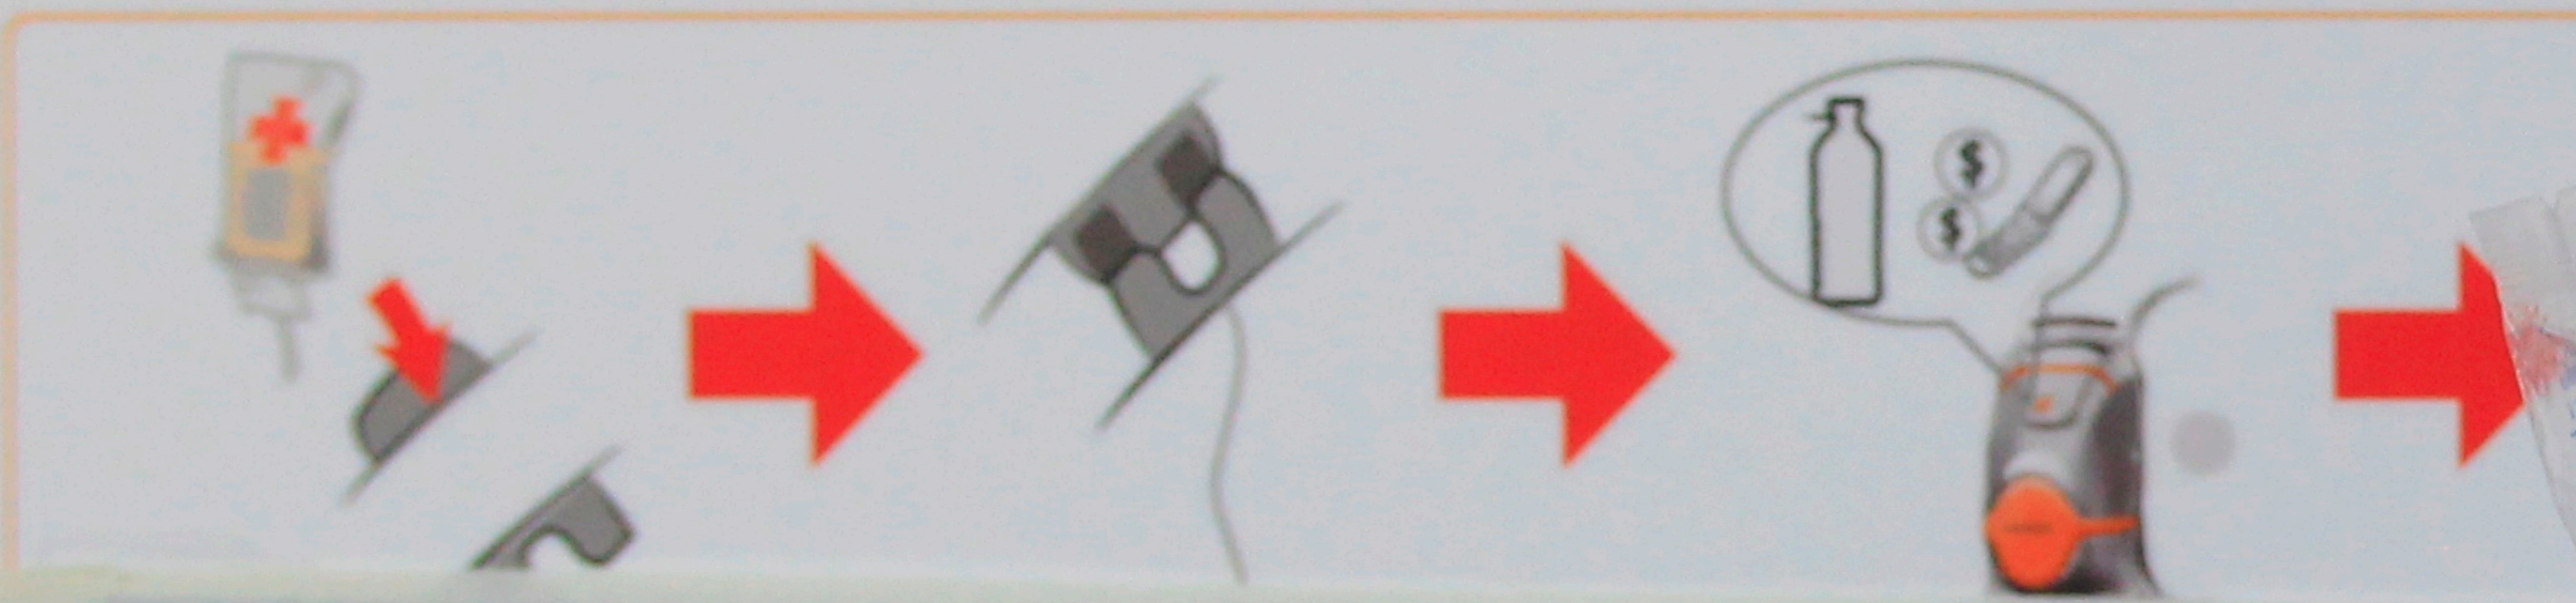

Freedom of movement
