Rubbish Bin

A simple action can do environmental protection

Content

Nowadays, environmental protection issue has been concerned around the world and many countries are also gradually increasing the implementation of garbage bags policy, this policy will be the future trend, and thus the use of garbage bags in order to cut down the cost and reduce the waste volume, the action becomes extremely compressed garbage important, However, people sometime afraid of dirty their hands while compression eliminates the need for garbage. They will have to use other bathroom tools to help the compression and it's very inconvenient.

The trash includes a barrel body, a bonding orbital and a cover. First, put garbage bags in the barrel, and then bonding orbital insertion, close the lid after the lid flipped through the garbage thrown into the rubbish bin, rubbish bins over when full, can pick up the lid, making it down by the compression bonding orbital along garbage.
